The new restroom

August 2026

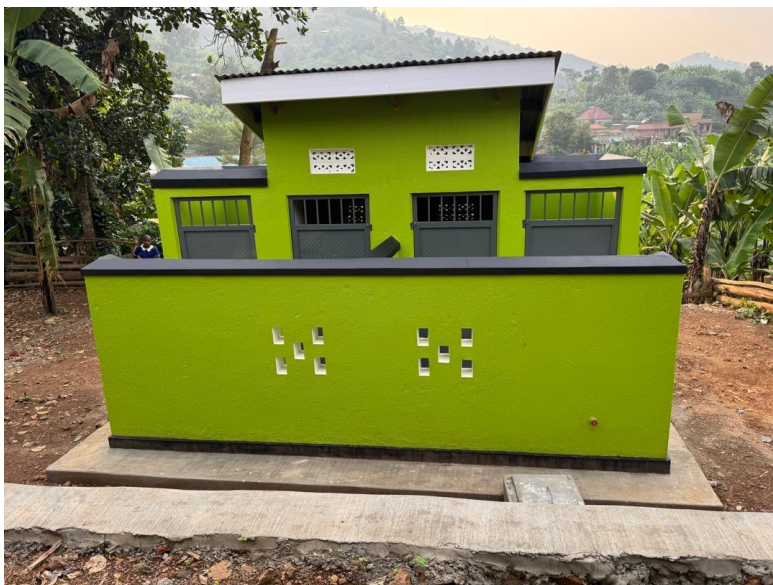

In June 2026, we reported that construction of our new restroom facility had begun. Today, we are delighted to announce: The restroom has been completed!

The new facility now shines in a beautiful green—not only blending colourfully into the surroundings but also making it immediately recognizable to the children. This marks another important step towards providing the children with better and more hygienic conditions.

We would like to share the first photos below. They show that a vision can indeed become a reality. What began with plans and discussions now stands visible and firmly on our grounds.

The lighting is still missing. Since the latrine is located outside the house, the children must be able to get there safely even in the dark. Good lighting is therefore especially important at night. However, planning and implementation have already started.

We are very pleased with this progress and would like to express our thanks to everyone who contributed to it through their support. Every single step brings us closer to our goal: to create a safe, dignified, and loving home for the Perlenkinder.
